Full Stack Development

Console-Based Quiz Application - [GitHub](#)

Developed a console-based quiz application in Java with a user-friendly interface and multiple-choice questions. Implemented instant correct answer display, a scoring system to track performance, and three lifeline help options. Designed and tested the application architecture to ensure smooth functionality and an engaging user experience.

Console-Based Movie Booking System:- [GitHub](#)

Developed a console-based Movie Booking System in Java using JDBC with MySQL for managing user registrations, logins, and ticket bookings. Implemented administrative features to add, update, and remove movie listings, along with ticket approval and cancellation options. Ensured data persistence, integrity, and an efficient user experience through secure authentication and booking history management.

PROJECTS

Collaborative Coding Platform| Team Project (~60 hrs.) - [GitHub](#)

JavaScript, React.js, Express.js, Node.js

Developed a collaborative coding platform using Node.js, Express.js, WebSocket, HTML, CSS, and JavaScript, enabling real-time code editing and execution for multiple users. Implemented secure authentication, session management, and chat functionality, with efficient back-end and intuitive front-end design. Gained hands-on experience in full-stack development, real-time applications, and version control using Git.

SKILLS

- **Programming Languages:** Java, JDBC, SQL, DBMS, HTML, CSS, Tailwind, JavaScript, React, python.
- **Architecture & Frameworks:** Microservices Architecture
- **Databases:** MySQL.
- **Analytics & Visualization Tools:** Microsoft Excel, PowerPoint
- **Developer Tools:** Git, Visual Studio, Eclipse.
